Course: B-Tech (CSE)

College: Mahaveer Swami Institute of Technology

Under the supervision of

Name: Mr. Divesh Kumar

Designation: Scientist- 'B'

Office: ISSA

DECLARATION

I hereby declare that the work which is being presented by me in this project/study entitled “Literature Survey on Interprocess Communication using Message Queueing” is an authentic record of my own work carried out under the supervision of Mr. Divesh Kumar, Scientist- ‘B’, Institute of Systems Studies and Analyses, Defence R&D Organisation, Ministry of Defence, Metcalfe House, Delhi 110054.

Name: Tushar Gyanu

Roll No.: 56255102716

Course: B-Tech (Computer Science Engineering)

College: Mahaveer Swami Institute of Technology

ACKNOWLEDGEMENT

I am grateful to Director, ISSA and Head of HRD for providing me the opportunity to carry out my project at this esteemed organization. I wish to express my deep gratitude to Mr. Divesh Kumar, Scientist- 'B', ISSA, DRDO for providing guidance and support so far in the project work. They were always there at the need of the hour and provided with all the help and facilities, which I required for the completion of my project.

About the Institute for System Studies and Analyses (ISSA)

Institute for System Studies and Analyses (ISSA) is a premier institution involved in systems analysis of Defence Systems. It provides analysis support to the top echelons of the three services, SA to RM, and DRDO HQs for scientific decision making. It also provides systems analysis support to system labs and other institutions under the Ministry of Defence. ISSA is primarily devoted to systems analysis and specializes in modeling and simulation in wide range of applications.

ISSA adopts state-of-the-art info-technologies such as Computer Networking, Software Engineering, Distributed Database, Distributed Simulation, Web Technologies, Situational Awareness and Soft-Computing Techniques in development of complex simulation products.

About the Defence Research and Development Organization (DRDO)

DRDO was formed in 1958 from the amalgamation of the then already functioning Technical Development Establishment (TDEs) of the Indian Army and the Directorate of Technical Development & Production (DTDP) with the Defence Science Organization (DSO). Today, DRDO is having more than 50 labs, engaged in developing Defence Technologies covering various disciplines like aeronautics, armaments, electronics, combat vehicles, engineering systems, instrumentation, missiles, advanced computing and simulation, special materials, naval systems, life sciences, training, information systems and agriculture. DRDO is backed by over 5000 scientists and about 25,000 other scientific, technical and supporting personnel.

Vision Make India prosperous by establishing world-class science and technology base and provide our Defence Services decisive edge by equipping them with internationally competitive systems and solutions.

Mission

1. Design, develop and lead to production state-of-the-art sensors, weapon systems, platforms and allied equipment for our Defence Services.
2. Provide technological solutions to the Defence Services to optimise combat effectiveness and to promote well-being of the troops.
3. Develop infrastructure and committed quality manpower and build strong technology base.

ABSTRACT

This project is aimed to prepare a literature survey on interprocess communication system that is based on **Defence Domain** using message queues.

Message queue allow the exchange of information between distributed applications. A message queue can reside in memory or disk storage. Messages stay in the queue until the time they are processed by a service consumer. Through the message queue, the application can be implemented independently - they do not need to know each other's position, or continue to implement procedures to remove the need for waiting to receive this message.
